

GREAT ICE SHEET

U. S. Geological Survey Tells of Topeka Formation.

Kaw River-Wakarusa Divide Formed by Glaciers.

TOPEKA IS WELL ADVERTISED

Department of Interior Issues Report on This City.

Survey Deals With Territory of the Santa Fe.

Considerable space of much value to the state and city is devoted to Kansas and Topeka and other Kansas

cities and towns in the government geological survey dealing with the territory covered by the Santa Fe railroad and issued by the department of the interior. Of Topeka the survey says in part:

"Topeka, the state capital, is one of the largest cities in Kansas. It has broad, well paved streets, with parking and shade trees. Its name is an Indian word, signifying the so-called Indian potato. It is a division point of the Santa Fe railway and place of convergence of several other branch lines and other railways. The general offices and extensive shops of the Santa Fe system are situated here, and there are many factories and local industries of various kinds, including quarries, brickyards, sand pits, large flour mills and what is said to be the largest creamery in the world. It was from Topeka that the Santa Fe began building a railway westward in 1889, but it did not reach Santa Fe until 1890.

Scene of Riots.

"Topeka was the scene of many riots during the conflict between the abolitionists and the advocates of slavery. Here in 1858 the Free Soil legislature, meeting in opposition to the proslavery legislature, was dis-

persed by United States troops acting under orders from President Pierce.

"A mile south of Pauline the railway crosses the line of the old high valley thru which in glacial time Kan-

sas river flowed across the divide into the valley of Wakarusa creek. This deflection of drainage to the south was probably caused by the advance of the great ice sheet southward between Lawrence and Topeka.

"Nearly all the area is in a high state of cultivation, producing large crops of grain and vegetables. The soil is rich and a fair proportion of rainfall, which averages 35 inches a year, comes at the time when crops are growing."

Considerable space is given to history and pictures of the geological formation of Kansas. The prehistoric age is fully covered.

On Kansas.

Of Kansas in general, the survey says:

"Kansas has considerable resources in oil, coal, cement rock and other minerals, but the principal industry of the state is agriculture. . . . Kansas produces about one-tenth of our wheat, ranking first in that crop."

"The estimated total value of the farm and livestock products in Kansas for 1914 was \$638,000,000, or nearly double the cost of the Panama canal."

"The average yield of wheat in Kansas has been 14.1 bushels for the last 10 years. Indian corn is an important crop in Kansas, the yield in 1913 being 174,225,000 bushels. Mineral products in Kansas had an aggregate value of \$27,312,563."

GREEK ARMY CHIEF OUT

Moschopoulos Particularly Friendly to Allies at Saloniki.

London, Sept. 26.—Gen. Constantine Moschopoulos, chief of the staff of the Greek army, has resigned.

General Moschopoulos commended the Greek forces at Saloniki at the time of the landing of the Anglo-French expeditionary forces. He ordered the troops under his command to salute French and British officers and was generally reported to be friendly to the cause of the allies.

In August General Moschopoulos was appointed chief-of-staff and in a statement given to the press expressed the hope that he could strengthen the good relations between Greece and the entente powers.

"I think I can be a precious advocate of the entente," he said.

HE DECLARES IT SILLY

Denial of "More Liquor in Dry States" by Dr. Ira Landrith.

Raton, N. M., Sept. 26.—The argument that more liquor is sold in "dry" states than in "wet" frequently advanced by the saloon interests, was declared "silly" today by Dr. Ira Landrith, prohibitionist candidate for vice president, at the last meeting of the "dry" special train campaigners in New Mexico.

From here the special train left for Colorado. Meetings were to be held today at Trinidad, La Junta, Rockyford, Pueblo and Colorado Springs. Dr. Frank Hanly, in suffering from "candidate's voice" and finds difficulty in speaking.

Japan's Ship Building Boom.

Tokio, Sept. 26.—The strides of Japan in ship building since the beginning of the war are shown by the official announcement that twenty-eight steamships with a total tonnage of 102,000 were launched during the first half of the current year. Nine steamers with a total tonnage of 28,950 are expected to be completed during the second half of the year.

Work Like Machines.

"The usual artillery preparation," said an artillery officer. Every gun was being fired at top speed. On his return, the correspondent had a view of the French gunners who were feeding shells into the gun breeches as grain in a threshing machine and with the mechanical precision of automatons.

Shortly after noon was the time chosen for the infantry to move forward under the cover of a final intensive chorus of hell from the artillery. The ridges in front of either side were flecked with racing sparks of flame. In an hour at least 10,000 shells must have been fired within sight of the correspondents.

Far to the south was Mon St. Quentin, two miles from Peronne and commanding that town. The allied commanders say will fall like a ripe plum when the time comes. The hill lay hazy above the green foliage of the river valley. In the midst of a burst of black smoke from shells of enormous caliber. Directly in front was Comblis, another town which had come to mean much to the imagination of the public in England and France who seem to regard its capture as of vital significance.

Comblis differed from the other villages in sight in that the walls of many of its buildings were still standing. It was different, too, in that it formed an oasis in the midst of the form of battle. Neither artillery nor infantry paid any attention to it. The gauge of battle was the high ground around it, the possession of which means the command of the town. Farther north lay the ruins of Ginchy and Guillemont.

Lost in Smoke Clouds.

At the appointed time the waves of infantry surged forward to the attack. Then the tremendous fire of the German guns swelled to its utmost volume until the whole field was lost in vast clouds of smoke. The attacking infantry vanished in that grim pall while high overhead scores of sausage-shaped balloons and hundreds of aeroplanes were circling in the air like silver in the brilliant sunlight, strove vainly to see what was passing beneath them.

Then, across the dead fields, arose a signal from Morval which told that the British infantry had reached another goal and that another village was taken. A man at a telephone in a nearby signal station called out the capture of the different strong points with the enthusiasm of one who scores a hotly contested ball game.

Presently the British wounded began to straggle back and their bearing as they moved along beside their prisoners was one of triumph. The war which the correspondent knew how the day had gone with them. Generally reports told of every position being taken on the minute set in the program. The British wounded said that, of course they got there as they were used to getting there. Their great gratification was that it was becoming an even fight since the Germans had no more prepared lines but both armies were fighting in the open.

According to the British officers the Germans or the fighting front have no longer any trenches except those which are dug under fire.

Corporation Builds Modern Town.

Pittsburg, Sept. 26.—Westinghouse interests will begin work soon on the erection of 600 homes for workers that will transform the Ardmore community into an industrial town. The houses will be of four, five and six rooms and rented so reasonably that every Westinghouse worker with family will be able to have a pleasant home. All streets will be paved and shade trees planted.

ALLEES' ATTACKS FORCE GERMANS TO FIGHT IN OPEN

Tentons Have No Trenches Left on Somme Front.

Monday Biggest Day Since Great Offensive Started.

BRITISH ADVANCE AT WILL

Soldiers Can See Nothing but Success in Battle.

Storm of Shells Always Precedes Infantry Attacks.

British Front in France, Sept. 25.—via London, 26.—This has been another great day for the Anglo-French forces on the Somme; as a spectacle for the observer, it was the most splendid of all the attacks made by the allied forces since the commencement of the great offensive. What either army was trying to do and how they were doing it, the positions they held and sought to conquer in the team play of the blue French legions and the khaki-clad brigades of Britain were comprehensible to the eye in the glorious autumn sunlight for a sweep of ten miles. The scene had the intoxication of war's grandeur—if war can be said to have any grandeur.

Tonight the British have taken half of Morval, all of Les Boeuf and have advanced their line on a front of 8,000 yards for an average depth of 1,000 yards; the French have stormed Ran-court and have pushed their line to the outskirts of the little village of Fregicourt, a mile east, and a little north of Comblis. The German stronghold of Comblis is virtually isolated.

The correspondent of the Associated Press went forward yesterday over the ridge in the Devil's Wood and Ginchy region which the British had fought for over two months to gain. He walked for two miles thru an area which reverberated to the blasts of the great guns, picking his way between the bursts of flame from the crashing batteries and moving around the rows of cannon as one who seeks a ford in a stream. On the other side of the ridge he saw guns where he had never seen them before—on the promised land of the lower levels, which the British had won by persistent siege work.

The British were close up to the British infantry who listened to their thunderous chorus as they prepared for the charge in today's attack.

MURDER MYSTERY REMAINS UNSOLVED

Argentina's Hermit President Sees Grave Situation.

Need Immigration to Occupy Vast Farm Area.

Buenos Aires, Sept. 26.—Hipolito Irigoyen, who will become president of Argentina, October 12, is reported devoting all his time to the study of his country's financial condition, in anticipation of post-bellum money and trade troubles.

This is only a report, for the president-elect is such a hermit that he is doing. He is living at present at his city residence in Buenos Aires instead of on his ranch. His town house is presided over by very young Spanish woman, with no more idea of politics than an armadillo. The numerous exalted personages who want to see Irigoyen have to seek appointments thru the medium of this ancient dame. They are seldom successful.

Has Largest Gold Reserve.

However, the report concerning the president-elect's financial studies rests on excellent authority.

The times are hard in Argentina, the country, from a money standpoint, is basically in an excellent condition. It has one of the largest gold reserves, proportionately, of any country in the world.

Irigoyen is said to believe, however, that the South American republics will face a situation of grave stress at the end of the war in Europe which, presumably, will come some time early in his administration.

He is believed to hold that the questions of finance and of population will be mingled, and that immigration to Argentina must be encouraged. That is, the country has money enough and immense potential resources, it has a population of only 7,000,000 to develop an available agricultural territory almost as large as the whole area drained by the Mississippi and Missouri rivers.
